Class: XII
Time: 1 Hour
Max. Marks: 20
Note: There are 09 questions in this question paper with internal choice. Q. No. 1-2 consist of multiple-choice questions carrying 1 mark each. Q. No. 3-4 consist of Assertion and Reason questions carrying 1 mark each. Q. No. 5-6 consist of very short answer questions carrying 2 marks each. Q. No. 7 consists of short answer questions carrying 3 marks each. Q. No. 8 consists of case- based questions carrying $4(1+1+2)$ marks. Q. No. 9 consists of long answer questions carrying 5 marks each.

| S. No. | Questions | Marks |
| :---: | :---: | :---: |
| 1. | Which of the following complexes does not show geometrical isomerism? <br> (a) $\left[\mathrm{Pt}\left(\mathrm{NH}_{3}\right)_{2} \mathrm{Cl}_{2}\right]$ <br> (b) $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{4} \mathrm{Cl}_{2}\right]$ <br> (c) $\left[\mathrm{Co} \mathrm{Cl}_{2}(\mathrm{en})_{2}\right]$ <br> (d) $\left[\mathrm{Ni}(\mathrm{CO})_{4}\right]$ | 1 |
| 2. | Wilkinson's catalyst is used for <br> (a) Epoxidation (b) <br> (b) hydrogenation <br> (c) polymerization <br> (d) substitution | 1 |
|  | In the following questions one mark each (Q. No. 3-4) a statement of Assertion (A) followed by a statement of Reason (R) is given. Choose the correct answer out of the following choices. <br> (i) A and R both are correct statements and R is the correct explanation for A . <br> (ii) A and R both are correct statements and R is not correct explanation for A . <br> (iii) A is correct statement but R is wrong statement. <br> (iv) A is wrong statement but R is correct statement. |  |
| 3. | Assertion (A): Different metal ions have different colours with the same ligand. Reason (R): Different metal ions have different crystal field splitting energy. | 1 |
| 4. | Assertion (A): $\left[\mathrm{Ni}(\mathrm{CN})_{4}\right]^{2-}$ has square planar and $\left[\mathrm{NiCl}_{4}\right]^{2-}$ has tetrahedral shape. <br>  | 1 |
| 5. | Write the state of hybridisation, the shape and the magnetic behaviour of the following complex entities: <br> (a) $\left[\mathrm{Cr}\left(\mathrm{NH}_{3}\right)_{4} \mathrm{Cl}_{2}\right] \mathrm{Cl}$ <br> (b) $\left[\mathrm{Co}(\mathrm{en})_{3}\right] \mathrm{Cl}_{3}$ | 2 |
| 6. | Using Crystal field theory, write the electronic configuration of iron ion in the following complex ion. Also, predict its magnetic behavior: $\left[\mathrm{Fe}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right]^{2+}$ OR <br> (a) On the basis of Crystal field theory, write the electronic configuration of $\mathrm{d}^{4}$ ion if $\Delta_{0}<\mathrm{P}$. <br> (b) Write the hybridisationand magnetic behaviour of the complex $\left[\mathrm{Ni}(\mathrm{CO})_{4}\right]$. (Atomic No. of $\mathrm{Ni}=28$ ) | 2 |
| 7. | (a) Calculate the spin only magnetic moment of complex $\left[\mathrm{FeF}_{6}\right]^{3-}$. <br> (b) Write the IUPAC name of the given complex: $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{5} \mathrm{Cl}\right] \mathrm{Cl}_{2}$. <br> (c) Why is the complex $\left[\mathrm{Co}(\mathrm{en})_{3}\right]^{3+}$ more stable than $\left[\mathrm{Co} \mathrm{F}_{6}\right]^{3-}$ ? <br> OR <br> Give reasons of the following observations: <br> (a) $\left[\mathrm{Mn}(\mathrm{CN})_{6}\right]^{3-}$ has two unpaired electrons whereas $\left[\mathrm{MnCl}_{6}\right]^{3-}$ has four unpaired electrons. <br> (b) $\left[\mathrm{Fe}(\mathrm{CN})_{6}\right]^{3-}$ ion is $\mathrm{d}^{2} \mathrm{sp}^{3}$ hybridised. <br> (c) $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{6}\right]^{3+}$ is a diamagnetic complex ion. | 3 |

| 8. | The following questions are case-based questions. Each question has an internal choice and carries $4(1+1+2)$ marks each. Read the passage carefully and answer the following questions that follow. <br> To explain bonding in coordination compounds various theories were proposed. One of the important theory was valence bond theory. Acccording to that, the central metal ion in the complex makes available a number of empty orbitals for the formation of coordination bonds with suitable ligands. The appropriate atomic orbitals of the metal hybridise to give a set of equivalent orbitals of definite geometry. The d-orbitals involved in the hybridisation may be either inner d-orbitals i.e., ( $n-1$ )d or outer dorbitals i.e., nd. For example, $\mathrm{Co}^{3+}$ forms both inner orbital and outer orbital complexes, with ammonia it forms $\left[\mathrm{Co}\left(\mathrm{NH}_{3}\right)_{6}\right]^{3+}$ and with fluorine it forms $\left[\mathrm{CoF}_{6}\right]^{3-}$ complex ion. <br> Answer the following questions: <br> (a) Discuss the hybridisation and magnetic character of $\left[\mathrm{CoF}_{6}\right]^{3-}$ ion. <br> (b) Write the hybridisation and magnetic character of $\left[\mathrm{Co}\left(\mathrm{C}_{2} \mathrm{O}_{4}\right)\right]^{3-}$. (Atomic No. of $\mathrm{Co}=27$ ) <br> (c) The magnetic moment of $\left[\mathrm{Cr}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right] \mathrm{Cl}_{3}$ is 3.83 BM . Why? OR <br> Write IUPAC name of the complex $\left[\mathrm{Cr}\left(\mathrm{H}_{2} \mathrm{O}\right)_{4} \mathrm{Cl}_{2}\right]^{+}$. Draw structures of geometrical isomers for this complex. | 4 |
| :---: | :---: | :---: |
| 9. | For the complex $\left[\mathrm{Fe}(\mathrm{en})_{2} \mathrm{Cl}_{2}\right] \mathrm{Cl}$, identify the following: <br> (a) Oxidation number of iron. <br> (b) Hybrid orbitals and shape of the complex. <br> (c) Magnetic behaviour of the complex. <br> (d) Number of its geometrical isomers. <br> (e) Whether there may be optical isomer also. <br> (f) Name of the complex. <br> OR <br> (a) Why are differnet colours observed in octahedral and tetrahedral complexes for the same metal and same ligand? <br> (b) Violet coloured $\left[\mathrm{Cr}\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right]^{3+}$ becomes bright blue when reduced to $[\mathrm{Cr}$ $\left.\left(\mathrm{H}_{2} \mathrm{O}\right)_{6}\right]^{2+}$. <br> (c) Arrange the following ligands in the order of increasing field strength in spectro chemical series: $\mathrm{NH}_{3}, \mathrm{CN}^{-}, \mathrm{CO}, \mathrm{H}_{2} \mathrm{O}$. | 5 |
